

Respiratory Multiplex PCR: Gauteng

Respiratory Virus Multiplex PCR: November findings

- The most frequently detected viruses during November were Rhino/Enterovirus (30%), Rhinovirus (26.2%), and Adenovirus (14.8%).
- Both Influenza A and B viruses were circulating at low levels during November.
- Please note: the Graph includes the combined data from the different Respiratory Multiplex assays offered by Ampath laboratories.

Please refer to the Ampath website for the current and previous respiratory viral statistics both countrywide and per region: <https://www.ampath.co.za/respiratory-tract-infection>
