

Percentage of specimens positive on the respiratory viral multiplex PCR and SARS-CoV-2 PCR

Percentage of specimens positive: SARS-CoV-2, Influenza A and Influenza B PCR

Comments

- The most frequently detected viruses during August were: rhino/enterovirus (31.6%), rhinovirus (24%) and adenovirus (15.1%).
- Week-by-week analysis of SARS-CoV-2, Influenza A and Influenza B:
 - The percentage of specimens testing positive for Influenza B has steadily increased from middle July throughout August, with 15.7% of specimens testing positive during late August/early September.
 - The percentage of specimens testing positive for SARS-CoV-2 and Influenza A were low during August with only 5.6 % and 6.6 % of specimens testing positive during late August/early September, respectively.
